Check out this quick video that will walk you through the process of unbricking your device. Most people do not know about the third party tools that can fix a bricked Windows Phone 7 device. The first thing to check when you get a Windows Phone 7 device bricked is your battery. If the phone is turned on and charging the battery then the device will not reboot. If the battery is completely discharged the phone will not reboot either. Next you need to determine if the phone is turned on or not. In order to check if the phone is turned on you can go to the Start screen. Double-tap the start screen and move your mouse pointer up the left side of the screen to access the Charms bar. Click the Settings option and then select Lock Screen. Next click the tile for the

Lock Screen. You should see the time and a small triangle. Tap the triangle and you will see the Lock Screen option. If the phone is on it will not reboot. When you get a Windows Phone 7 device bricked the first thing to check is the memory card. If you have a memory card installed in the device then you can check if it is in use by clicking the Start screen. Tap the taskbar

and you should see the option to click on the memory card icon. If the memory card is in use then it will not be mounted or formatted. To do so you would need to format it by using a memory card reader. If the memory card is not in use then you will need to format it. To format the memory card you would need to plug it into a memory card reader. You will then be prompted to open the memory card. Click the “Yes” button to format the memory card. Once the memory card is formatted it will be empty. Next you need to check if the phone is locked or not. To check if the phone is locked you will need to access the Start screen. Double-tap the start screen and move the mouse pointer up the left side of the screen to access the Charms bar. Click the Settings option and then select Lock Screen. Click the tile for the Lock Screen. Tap the icon that says “Turn Off”. If the phone is locked it will not reboot. If the phone is not locked then you will need to power off the phone. To do so you would need to

open the Start screen and tap the power button on the right side of the screen. Once you have done that 82157476af
